- Users migrating from Desktop to Mobile platforms.
- Users targeting multiple Mobile platforms with new or existing apps.

# Agenda

Strategies to target multiple mobile platforms

Develop and deploy using Qt Creator

<http://www.iconarchive.com/artist/svengraph.html> <http://www.iconarchive.com/artist/dakirby309.html>

# Strategies to target multiple mobile platforms with Qt

<http://www.iconarchive.com/artist/svengraph.html> <http://www.iconarchive.com/artist/dakirby309.html>

# Qt is glorious!

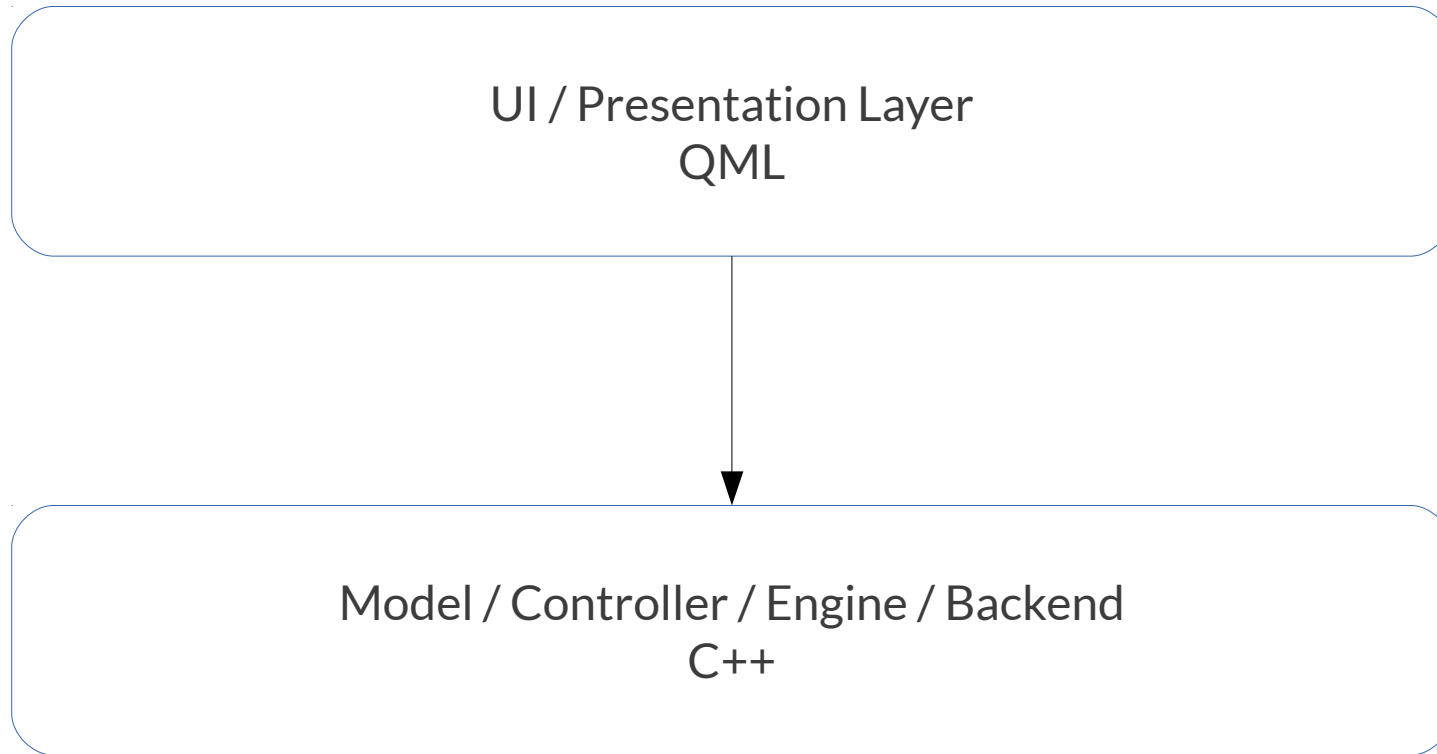

- Faster Development Time
  - Shorter learning curve
  - Common code base
  - Comprehensive cross-platform tools
- High performance
- Smaller and cohesive team
- Higher ROI, Faster Time to market

... but Qt is not a magician!

- Functional tools.
- Need to use them appropriately.

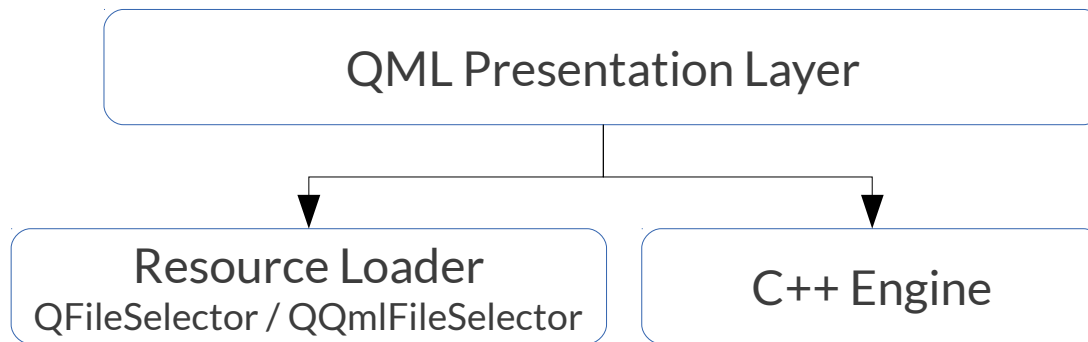

# Application Architecture

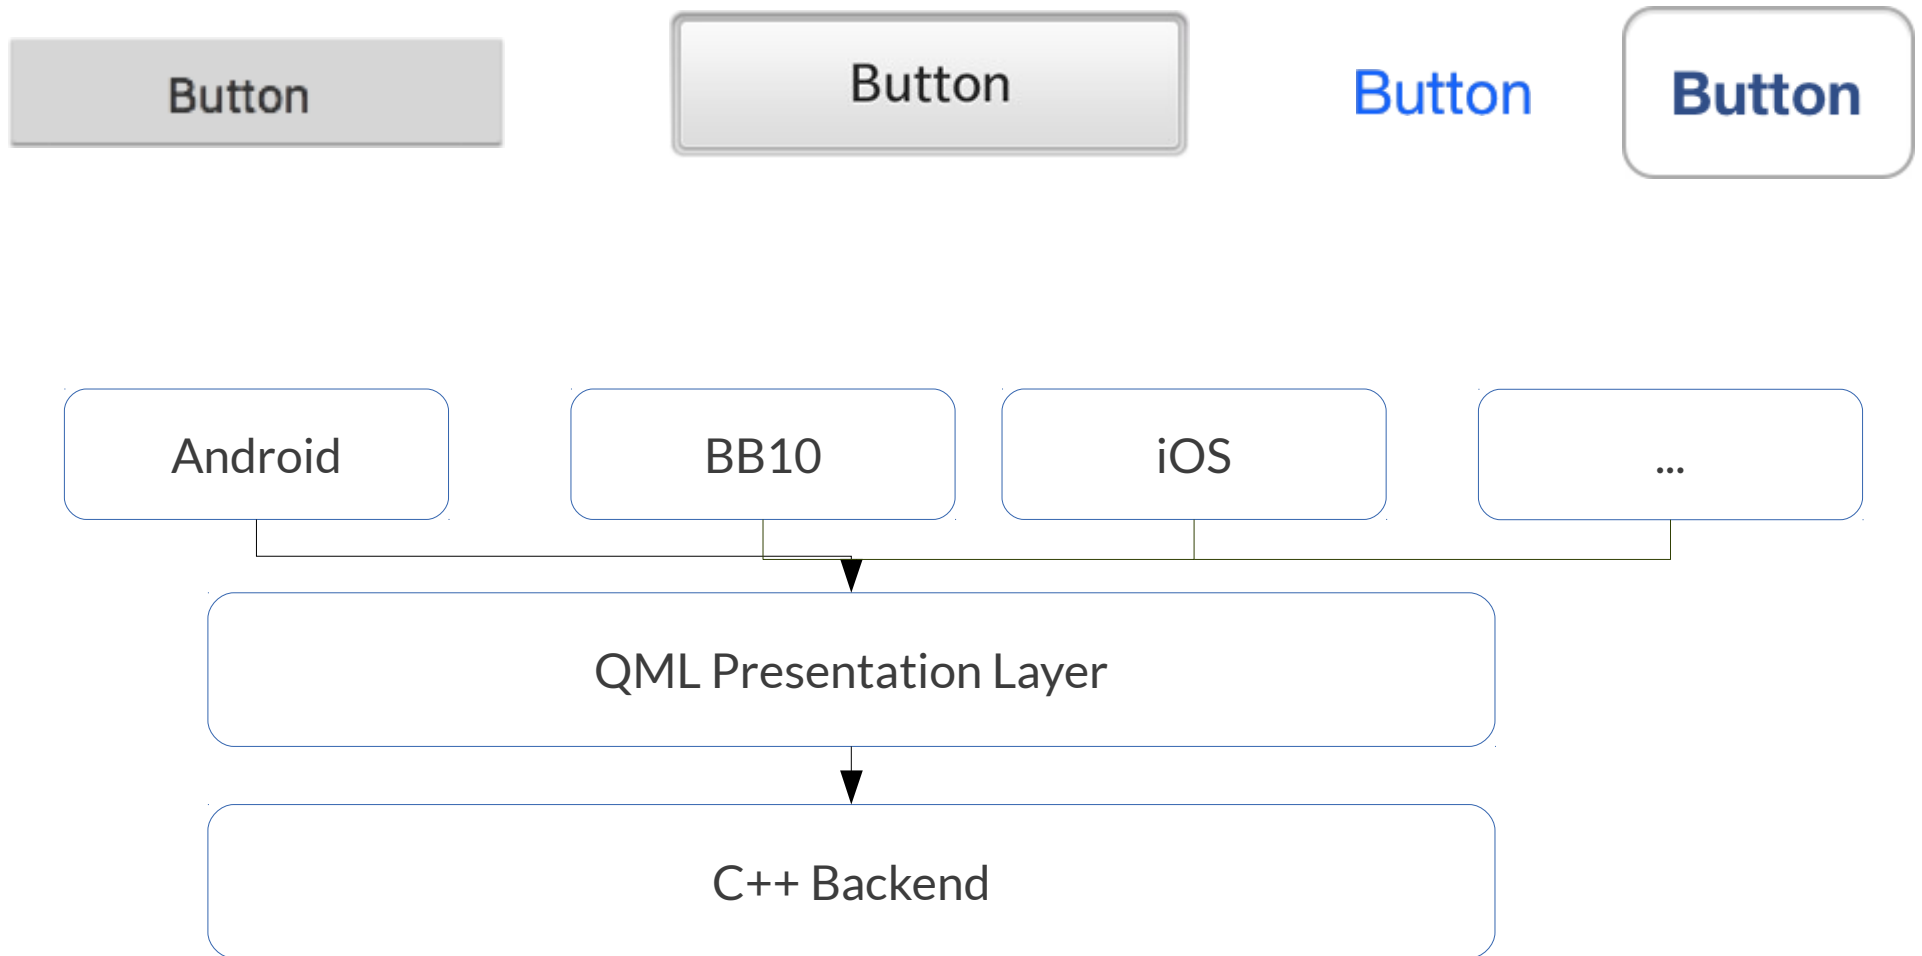

# UI Resources

# Version info

- Qt version info – 5.1.1
- Qt Creator version info – 3.0
- Sailfish SDK version info – latest alpha (Oct 1, 2013)

# Setting up Android

- Android SDK
  - For Windows: Install Android Debug Bridge provided by device manufacturer to enable USB debugging.
- Android NDK
- Apache Ant v1.8 or later
- JDK / OpenJDK v6 or later
- Run `<adb>/sdk/tools/android update sdk`
- Configure Qt Creator

# Setting up Blackberry

- Blackberry 10 NDK
- Run `sdkinstall --install x.x.x.x`
- Run `sdkinstall --simulator` (Requires VMPlayer)
- Configure Qt Creator

# Setting up for iOS

- Install latest XCode
  - iOS SDK
  - Command line tools
- Get a developer license
- Configure Qt Creator
  
- Deployment works out of the box
- Debugging support – Qt Creator 3.0

# Setting up for Sailfish

- Requires VirtualBox
- Sailfish SDK from [www.sailfish.org](http://www.sailfish.org) website

# Summary

- Dedicated Resource Handler
- Keep styles in separate QML components
- Use a state machine for UI navigation
- Do not assume platform / device features
- CI is your best friend
- Development environment setup
- Build and Deploy
